Introducing HVSS

HVSS is a leading Independent Connection Provider. We supply connections for electricity, water, gas, fibre, EV and renewables.

We work with housing developers, commercial developers, large scale construction sites, high rise buildings, local infrastructure and master planners to deliver a spectrum of straightforward and complex connections.

We're best known for our Extra High Voltage (EHV) & Grid Connections, with a proven track record delivering turnkey EHV projects. We work with diverse DNOs and IDNOs, offering an all-inclusive approach which encompasses civils, street works, electrical and mechanical design, and building programming.

Our team has extensive expertise in high voltage, with proficiency in commercial enterprises, health care facilities, Ministry of Defence establishments and data centres. Our high voltage services include grid connections, primary substation installations, extra high voltage installations, private networks, customer networks, and 11 kV maintenance.

What else we do

Testing & Commissioning: fault location, testing of installations, sub-station commissioning, DNO final audits.

EV Charging: delivering fast, turnkey electric vehicle charging hubs.

Renewables: enhancing renewable energy through expert-led grid connections.

Inspection, Maintenance & Support: preventative maintenance, including using thermal imaging, ultrasound scanning and UltraTEVs to support diagnostics.

Electricity: load requirements, point of connection charges, diversions of existing cables and apparatus, regulatory advice.

Gas: single and multi-commercial gas connections, new gas main infrastructure on medium and low-pressure networks.

Water: design, install and commission water mains and services for all types of developments.

Fibre: design, build and deliver fibre networks to high-rise developments and premium fibre networks to new-build residential.
